

1.1.1 Tarefa. Xestión de layouts avanzados

Empregando unicamente un layout manager de tipo GridBagLayout desenvolve a seguinte aplicación:

The screenshot shows a Java Swing window titled "Layouts avanzados". The window contains a form with the following elements:

- A text field for "Artículo".
- Two text fields for "Prezo / unidade" and "Unidades".
- Two text fields for "Prezo sen I.V.E." and "I.V.E.".
- A text field for "Prezo con I.V.E.".
- A large text area for "Observacións".
- Three buttons on the right: "Realizar pedido", "Limpar formulario", and "Pegar".

The form is laid out using a fixed layout manager, where the components are positioned at specific coordinates and sizes, resulting in a rigid appearance.

Se redimensionamos o formulario da imaxe anterior este deberá de ser o seu aspecto:

The screenshot shows the same Java Swing window "Layouts avanzados" after it has been resized. The components are now scaled and repositioned to fit the new window dimensions. The "Observacións" text area now has a vertical scrollbar, indicating it has grown in size. The overall layout remains visually consistent but is now flexible to the window's dimensions.

 Layouts avanzados
